

# DustFloc™

## Dust Suppressant

### PRODUCT OVERVIEW:

DustFloc is a portable soil stabilizing system used to prevent fugitive dust. It is a proprietary blend of environmentally friendly, natural polysaccharides. DustFloc can be used as a stand alone stabilizer or in conjunction with all hydro-mulches.

Once applied, the DustFloc liquid will congeal quickly and dry to form a crust on the soil surface, preventing wind erosion and resistant to limited rainfall conditions. It will provide good protection for fugitive soils and PM 10 sources. Use for landfills, road banks, construction sites, stockpiled topsoil, airport runway and taxiway shoulders, helipads and most slopes and berms where vegetation has not been established.

### PRODUCT OVERVIEW:

The soil stabilizer shall be manufactured of environmentally friendly natural polysaccharides. DustFloc has the following chemical analysis:

- Protein: 5% max
- Ash: 1.0% max
- Fiber: 0.5% max
- pH: 5.5-6.5
- Viscosity (60lb with 1000 gallons of water in 15 minutes of stirring): 50 cps
